

**✓ Done:** View**To do:** Make a submission**To do:** Receive a grade

Well done on making it this far!

Using what you've learnt in Project 5, complete the following challenge:

**Create a catalogue of 5 products of your choice:**

1. On your homepage, display the pictures of your 5 products.
2. When a user clicks on a product, they must be taken to a page that displays detailed information about the product. Your product page should have the following:
  1. Add a heading with the title of the product. ✓
  2. A few more pictures of the product.
  3. The price of the product. ✓
  4. Stock availability (how many items are in stock?) ✓
  5. A description about the product. ✓
  6. A product information table (this displays info like weight, dimensions, barcodes, etc...)
  7. A "Buy Now" button. ✓
3. Your app should also have a navigation bar with 3 links: Home, About and Contact Us.
  1. The "Home" button should take the user back to the main catalogue page.
  2. The "About" button should take the user to a page that describes your online business and the products that you sell.
  3. On the "Contact Us" page, display some mock contact information as well as a contact form.

Once you are done, create a repository in your IT varsity GitHub organization called: **Module-1-Assessment-6**

Need a refresher on [how to correctly submit assessments?](#)

Upload your project to the new repository, activate Pages in your repository, then submit the links below using the following format:

**Repository:** [LINK]

**Pages:** [LINK]

Good luck and don't forget to let us know if you have any questions.
